EMPLOYMENT

2016 – Present

Redhat India (R&D) – Devtools

Associate Software Engineer

Primarily a Frontend Engineer, opensource contributor.

Installer (Desktop Application Based On Electron):

Built up the whole UI project from scratch. Suggested a better Mock UX design to represent Installer project. Worked from the ground up in setting up frontend infrastructure, setting up and releasing NPM packages, creating test suites. Created build for macOS and Windows (7, 8 and 10).

Visual Studio Code - Code Editor:

A Visual Studio Code extension for interacting with different server adapter, runtimes and openshift.

This extension supports various server like (Jboss EAP, wildfly and minishift). This can be accessible via different command and supported for Linux, Windows and macOS.

npm package:

A simple client for Runtime server Protocol (RSP) written in typescript. This protocol will allow an IDE or other client to control various types of application servers. The IDE will communicate with any number of servers whose job is to discover, start, stop and eventually publish to application servers.

Contributed heavily on Opensource on Github.

PROFESSIONAL SKILLS

HTML5

CSS3
